

ASU FACT SHEET

Compressed Gas Cylinder Training

Compressed gases have been responsible for not only incidents at ASU but also for some very serious ones across academic labs elsewhere. To minimize such occurrences, ASU requires both an online series of training modules *and* a hands-on mentoring verification for anyone working with, adjusting, or even transporting a compressed gas cylinder (**note:** this includes for use with our GC system and those working on anaerobic cultures).

You can access the online training via the EHS training page here - <https://cfo.asu.edu/ehs-training>. Just scroll down and click on "Blackboard classes" and scroll down again and "Enroll" in the "Compressed gas – Under Pressure" class. Once done with all 11 modules, contact Safety Officer or your School's Lab Manager to perform the "Mentor verification checklist".
